

Fujicolor Crystal Archive Professional Digital Paper Type DPII Silk

This paper delivers high quality prints on a silk surface, more difficult to scan than other surfaces, providing further protection for the photographer beyond the copyright backprint.

Overview **Features** Support

Features

- **Vibrant Color Reproduction** - Expanded color reproduction range with high saturation, ideally suited to commercial portraiture.
- **Pure Whites** - Clearer, more distinct print images and sharper text quality.
- **Silk Surface** - More common in years past, this silk surface is now distinctive.
- **Excellent Image Stability** - Highest level of silver halide image stability for display.
- **Printer Calibration** - Same as Super Type PD. See product bulletin AF3-212E PIB Fujicolor Crystal Archive Type DP II for details.
- **Processing** - Fuji Hunt CP-RA Process or RA-4 type processes.
- **Backprint** - "Fujicolor Professional Paper" backprint.

Fujicolor Crystal Archive Digital Paper Type DPII Silk was designed for professional labs and school photographers to provide their customers with distinctive high-quality portrait prints.
